

Where we are — and the next 30 days

Everything from our coffee chat is now built into the working prototype. Here's the short version and the decisions we need to make together.

1 · Your ideas are in the app

- The 4 tracks (Employment / Education / Trades / Entrepreneur)
- Resume scanner with military-to-civilian translation
- Location guidance driven by VA disability % (hospital proximity)
- Networking & mentorship hub, tailored to the chosen path
- Type-your-own answers on every question + open notes
- "Pathfinder" decision engine → recommended path with a % fit
- Smart transcript (military training → college credit examples)
- Honest "get your full disability benefit" prep (free VSO route)
- SkillBridge surfaced for anyone still in service
- The action plan now has an endpoint — a destination, not chores

Plus: a professional redesign, adjustable text size for older eyes, works on phones, and a print-your-gameplan button. All benefit data is still clearly-labeled sample data.

2 · How to look at it (5 minutes)

- Open the attached **vetpath-demo.html** file — just double-click it; it runs in your browser, nothing to install.
- Go to **Strategy** → click **"Load a sample veteran & plan."**
- Then try **Pathfinder** → **"Help me decide"** and answer the 9 questions as yourself.
- Gut-check: does the recommended path feel right? Does anything feel off to a veteran's eye?

3 · Decisions we need to make together

Decision	Recommendation on the table
Name	Keep "VetPath" (check domain/trademark) — or pick another before we go public.
Structure	LLC / benefit corp now for speed; nonprofit arm later if grants become the core.
How it makes money	Free for veterans. Organizations pay (VSOs, universities, employers) + grants/sponsors.
First real data	Build accurate, cited benefits for 2 states first — which two?
First pilot	Your recurring meeting. Which date works?

4 · Next 30 days

FRANK **This week:** click through the demo (5 min) and send reactions — especially anything that would make a veteran distrust it.

FRANK **Pick two dates:** one for a working session on the decisions above, one to pilot it live at your meeting.

FRANK **Line up 5–10 veterans** willing to try it and give honest feedback (we have a printed worksheet for this).

KALEB **Start the real data** for our first two states — cited, dated, verified benefit info (the credibility engine).

KALEB **Draft the partner one-pager** (what a VSO/university/employer gets and pays) + a list of 5 veteran-focused grants.

KALEB **Name check:** domain and trademark availability for VetPath (and backups).

The one thing that matters most: putting this in front of real veterans at your meeting. Everything else — name, money, features — gets easier once we've watched ten vets use it.

VetPath is a planning & education tool — not the VA, a law firm, or an accredited claims representative. All benefit data in the prototype is sample/demo data; eligibility must be verified through VA.gov, state agencies, or accredited VSOs. Fit scores are demo estimates, not guarantees.
